

Planta 3 + Modelo Inflación de ceros (ZIP)

AIC = 226.4, BIC = 232.1, logLik = -110.2

Modelo condicional (componente de conteo, coeficientes en escala log)

|             | Estimate | Std. Error | z value | Pr(> z ) |
|-------------|----------|------------|---------|----------|
| (Intercept) | 1.687    | 0.182      | 9.250   | 0.000    |
| distance    | -0.008   | 0.004      | -1.946  | 0.052    |

Modelo de inflación de ceros (probabilidad de ceros estructurales, coeficientes en escala logit)

|             | Estimate | Std. Error | z value | Pr(> z ) |
|-------------|----------|------------|---------|----------|
| (Intercept) | -0.249   | 0.301      | -0.825  | 0.409    |

Predicciones (abundancia esperada, escala de respuesta)

| Distancia | Predicho | IC 2.5% | IC 97.5% |
|-----------|----------|---------|----------|
| 0         | 5.40     | 3.78    | 7.72     |
| 15        | 4.81     | 3.68    | 6.28     |
| 30        | 4.28     | 3.47    | 5.27     |
| 45        | 3.81     | 3.10    | 4.68     |
| 60        | 3.39     | 2.61    | 4.41     |
| 75        | 3.02     | 2.12    | 4.28     |
| 90        | 2.68     | 1.71    | 4.22     |
| 100       | 2.48     | 1.47    | 4.20     |
